Job Market Analysis

Exploring how skills influence salary trends in the market of data

Data Professors Co.

Focused on the most in-demand skills

Match candidates to data-job market needs

Upskill internal teams with targeted programs

Track salary trends to stay competitive

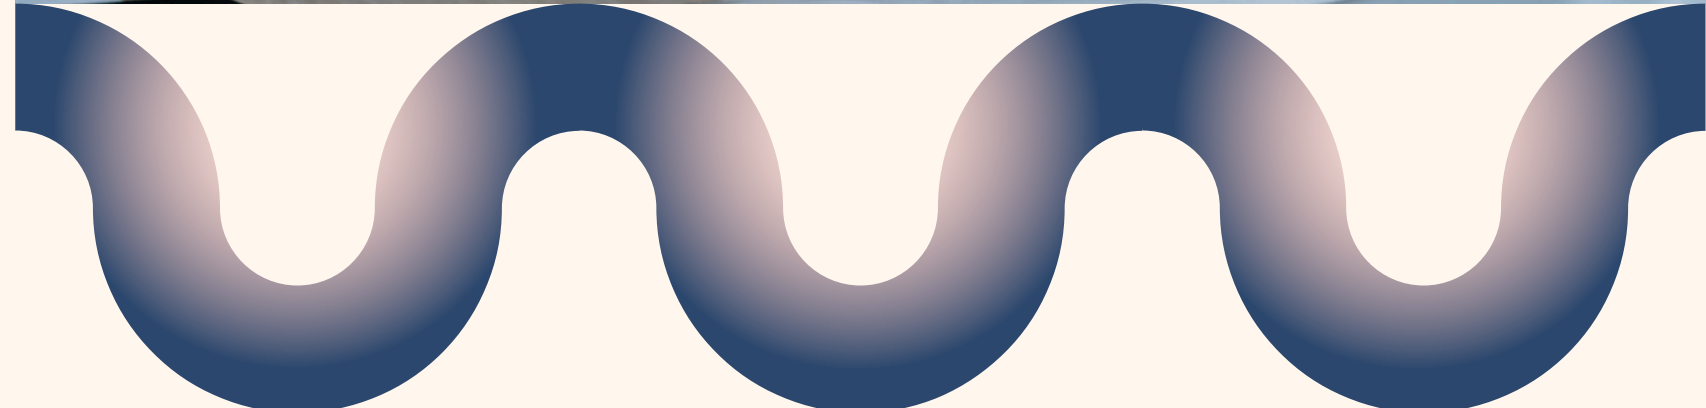

Prioritize hiring for remote-friendly roles

The Problem

The job market is noisy. Thousands of listings appear daily. But real trends in salaries, skills, and roles stay unclear.

This means...

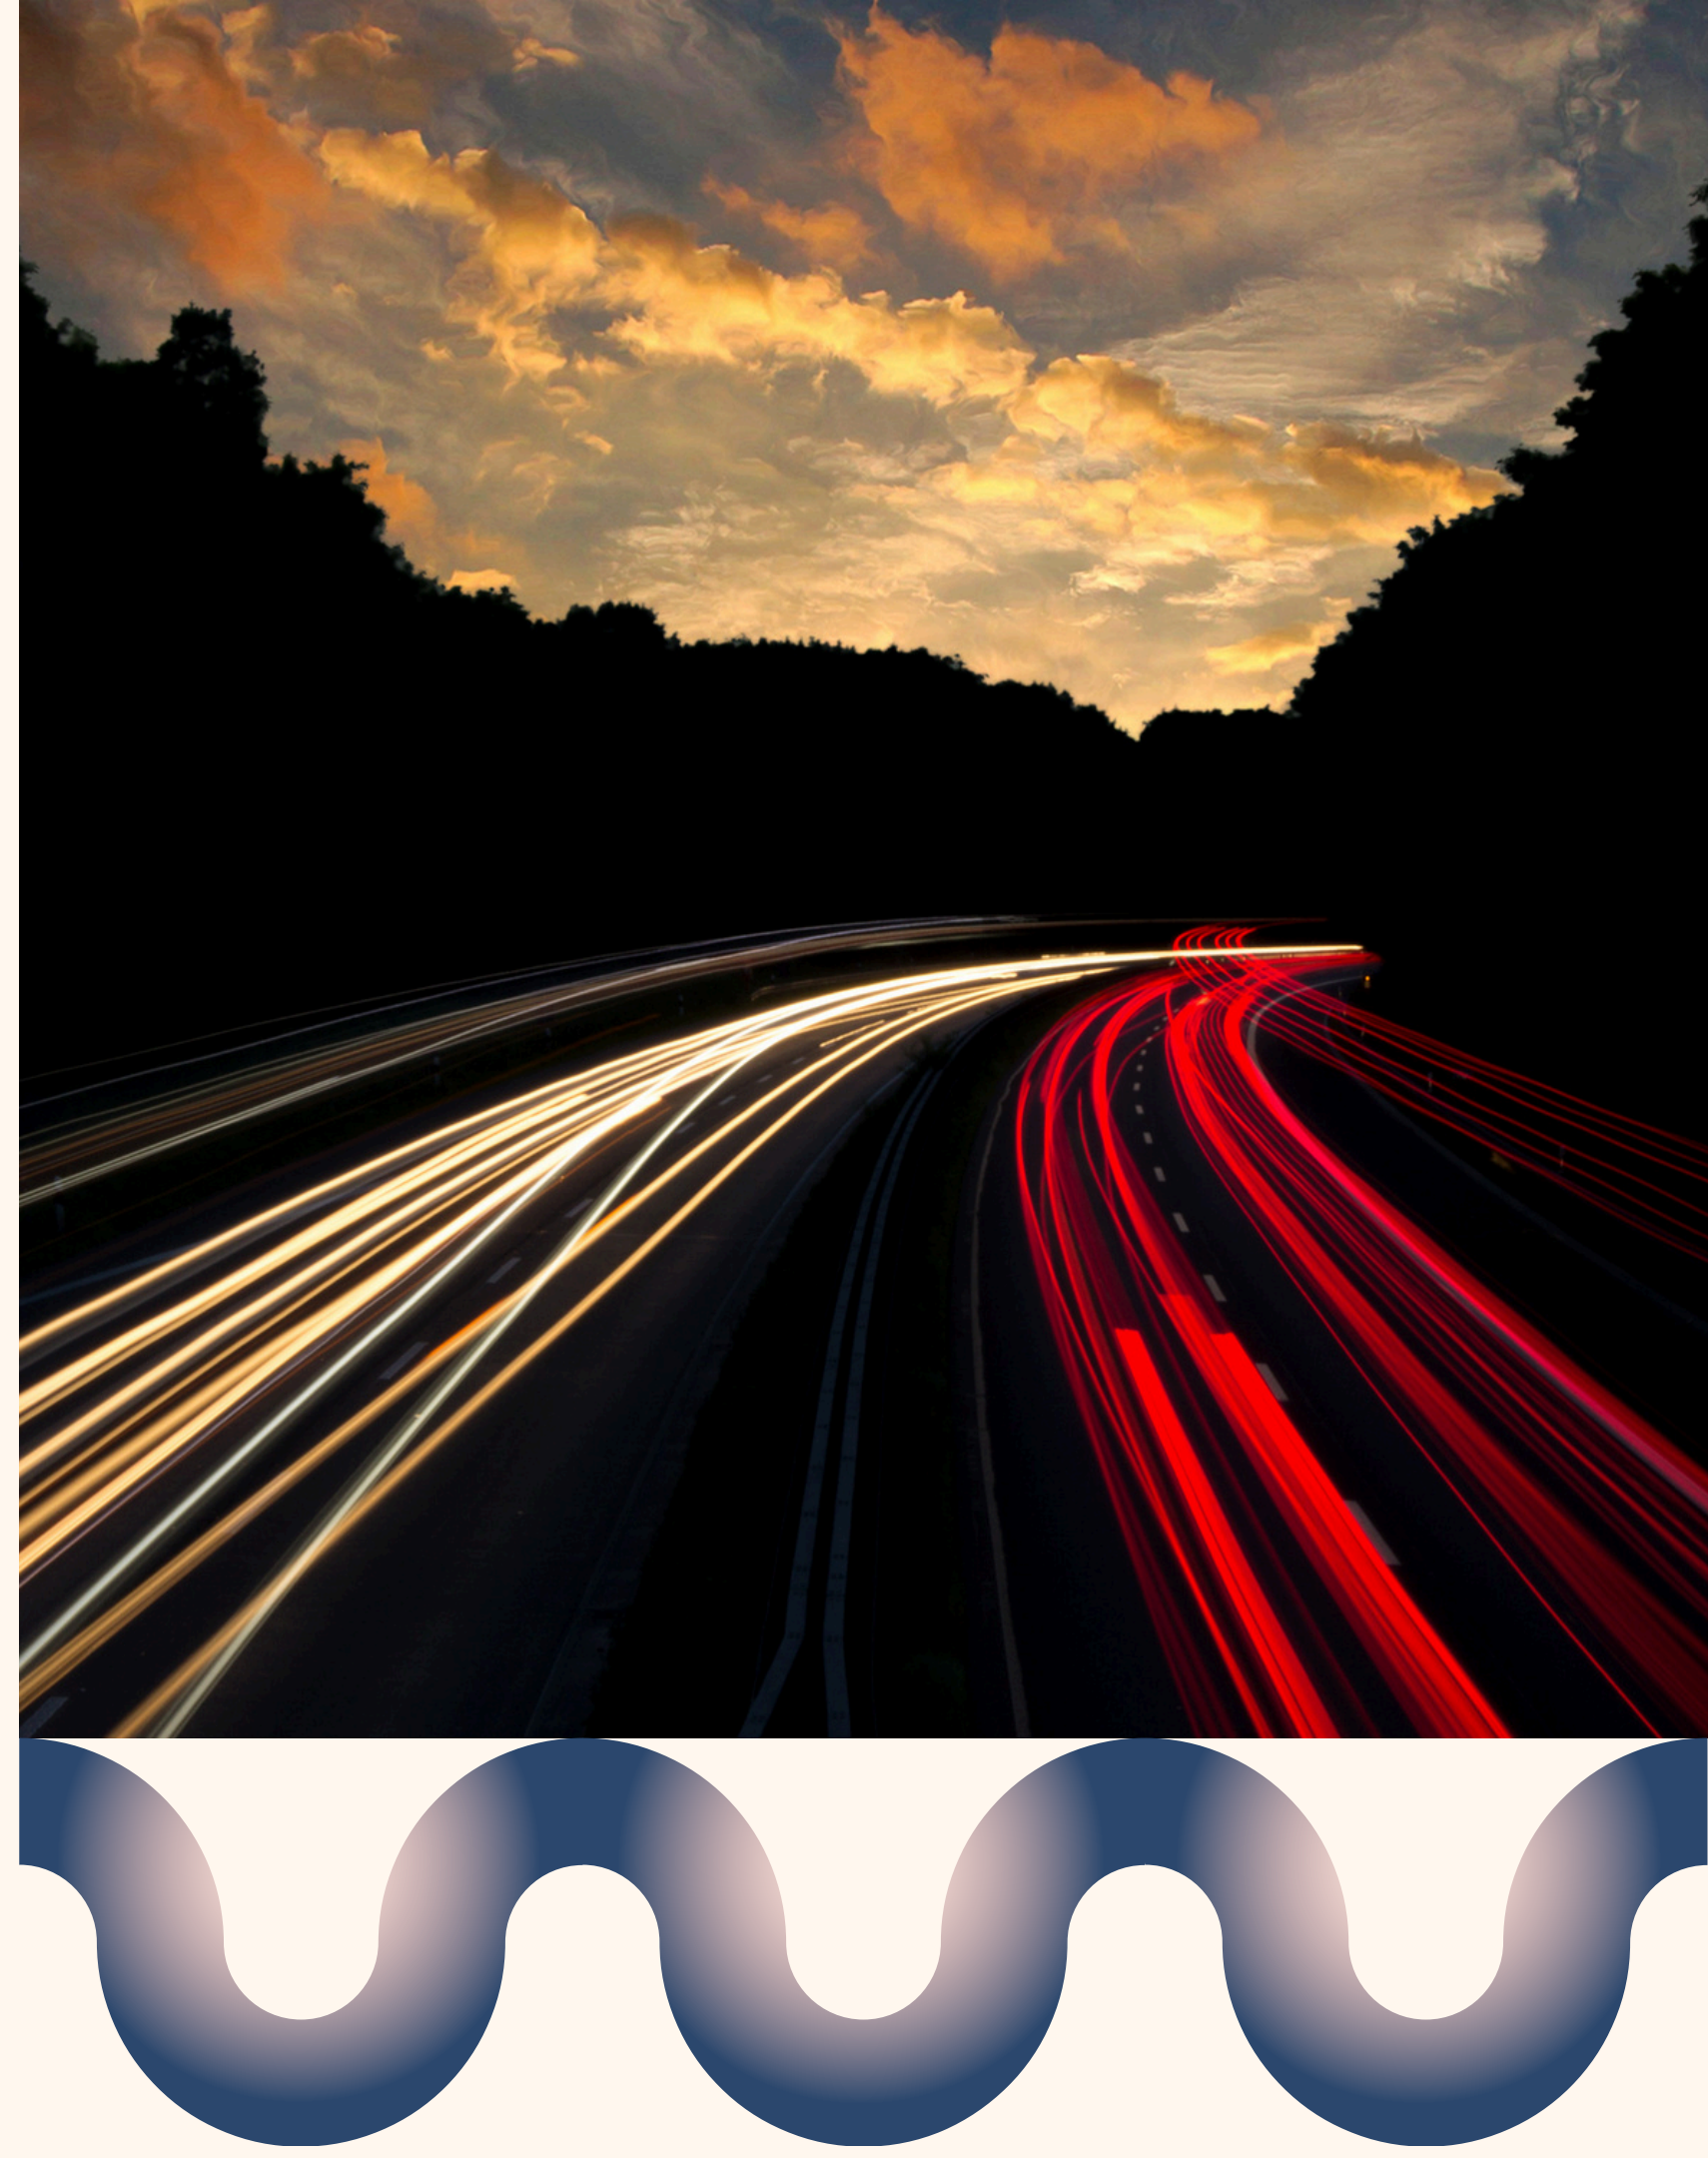

**Data job seekers face uncertainty
&
Companies miss opportunities**

Relevance

- Work models keep shifting: remote, hybrid, on-site.
- You need to know what drives offers – and what pays... and data-driven insights helps you position yourself.

Are we making decisions based on data or assumptions?

The solution

We're building an interactive tool that breaks down job posting data.

It reveals trends in:

- Salaries
- Required skills
- Work modes
- Locations

All backed by real data!

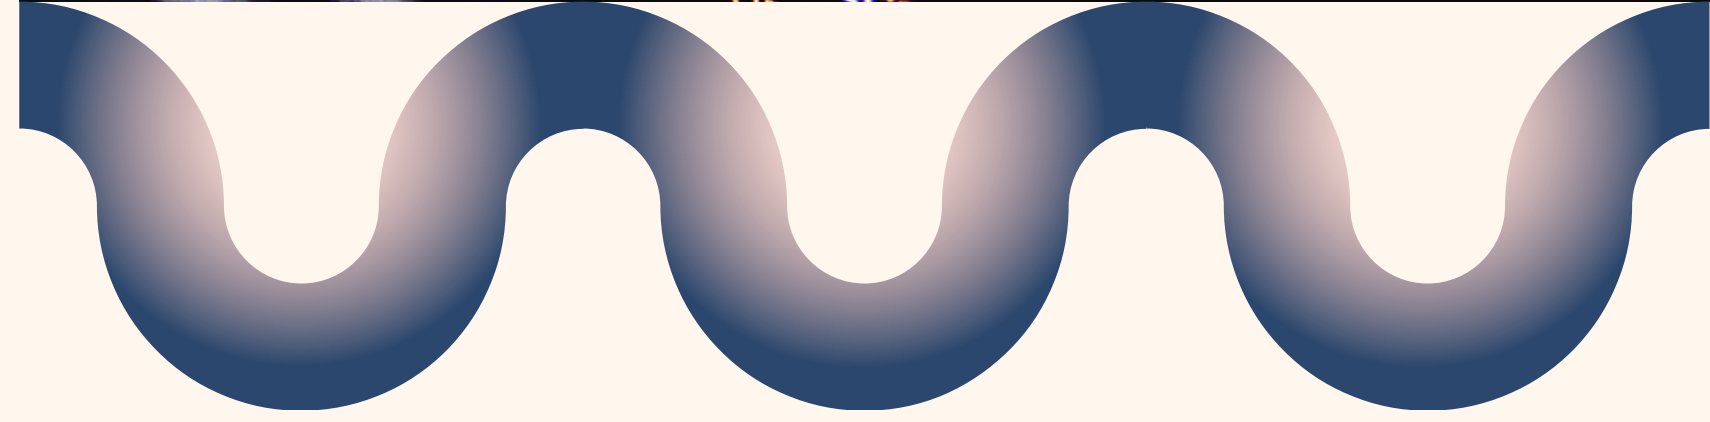

Datasets

We combined two sources:

-  Adzuna API (adzuna.com)
-  Public CSV from GitHub

Each included:

- Job titles
- Locations
- Salaries
- Skills
- Work types
- Dates

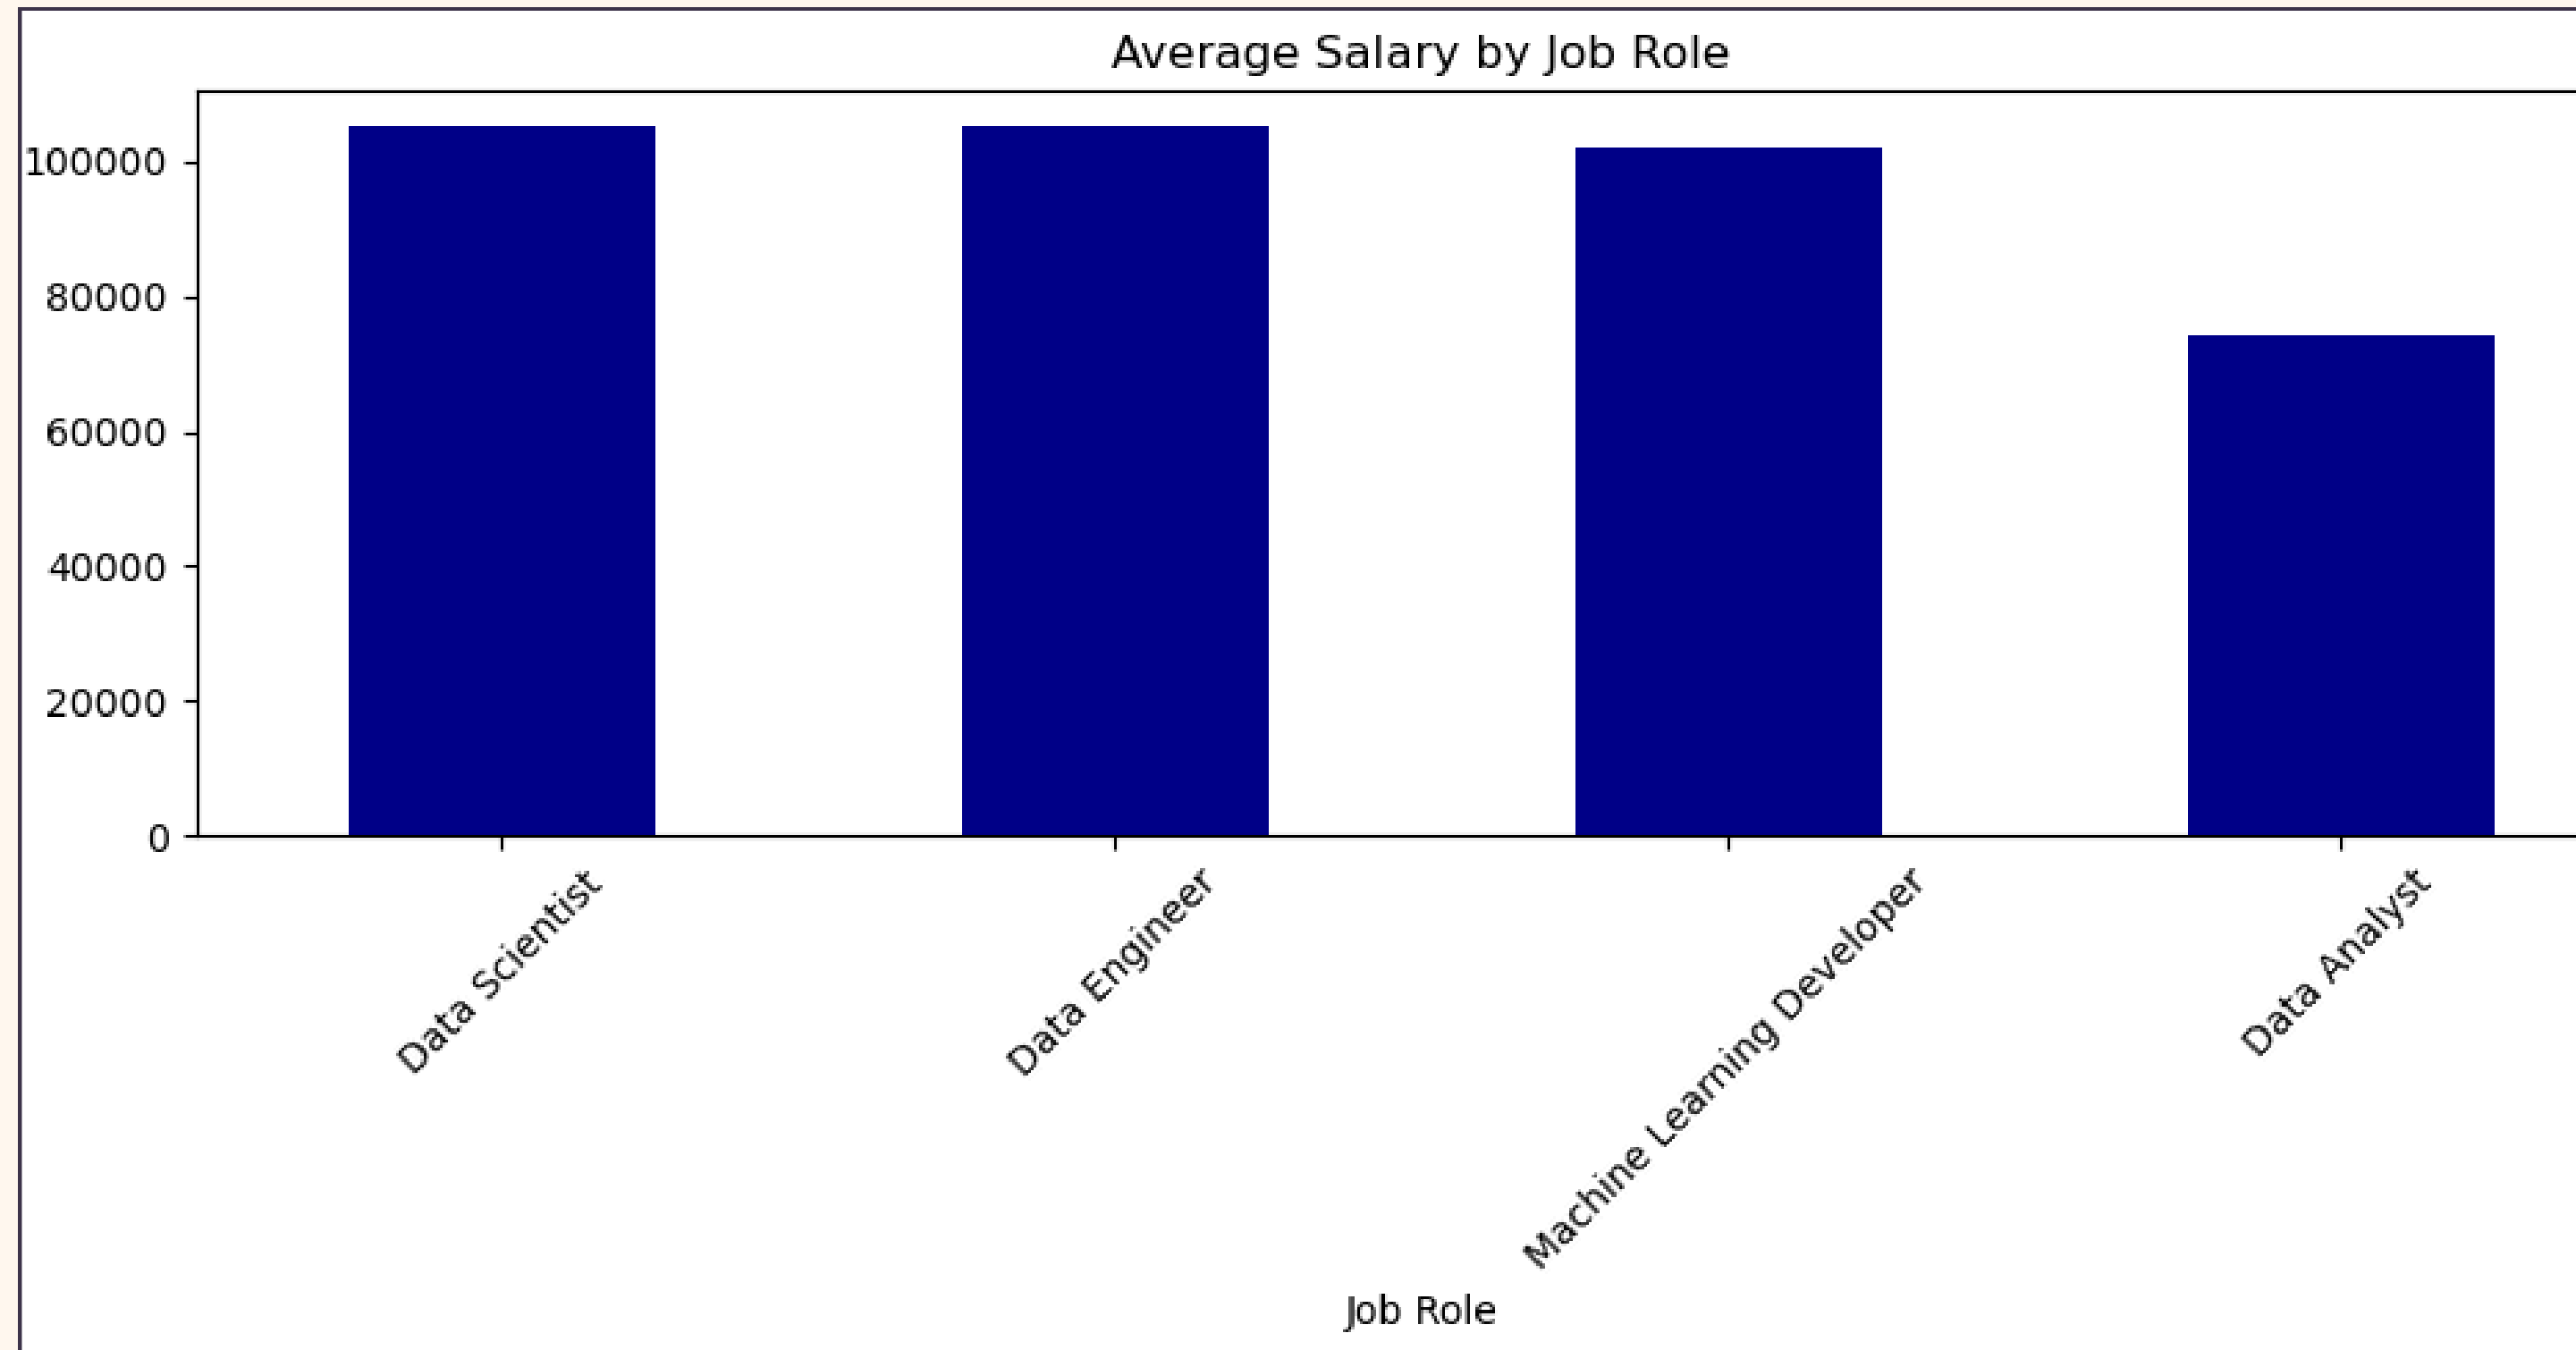

HYPOTHESES

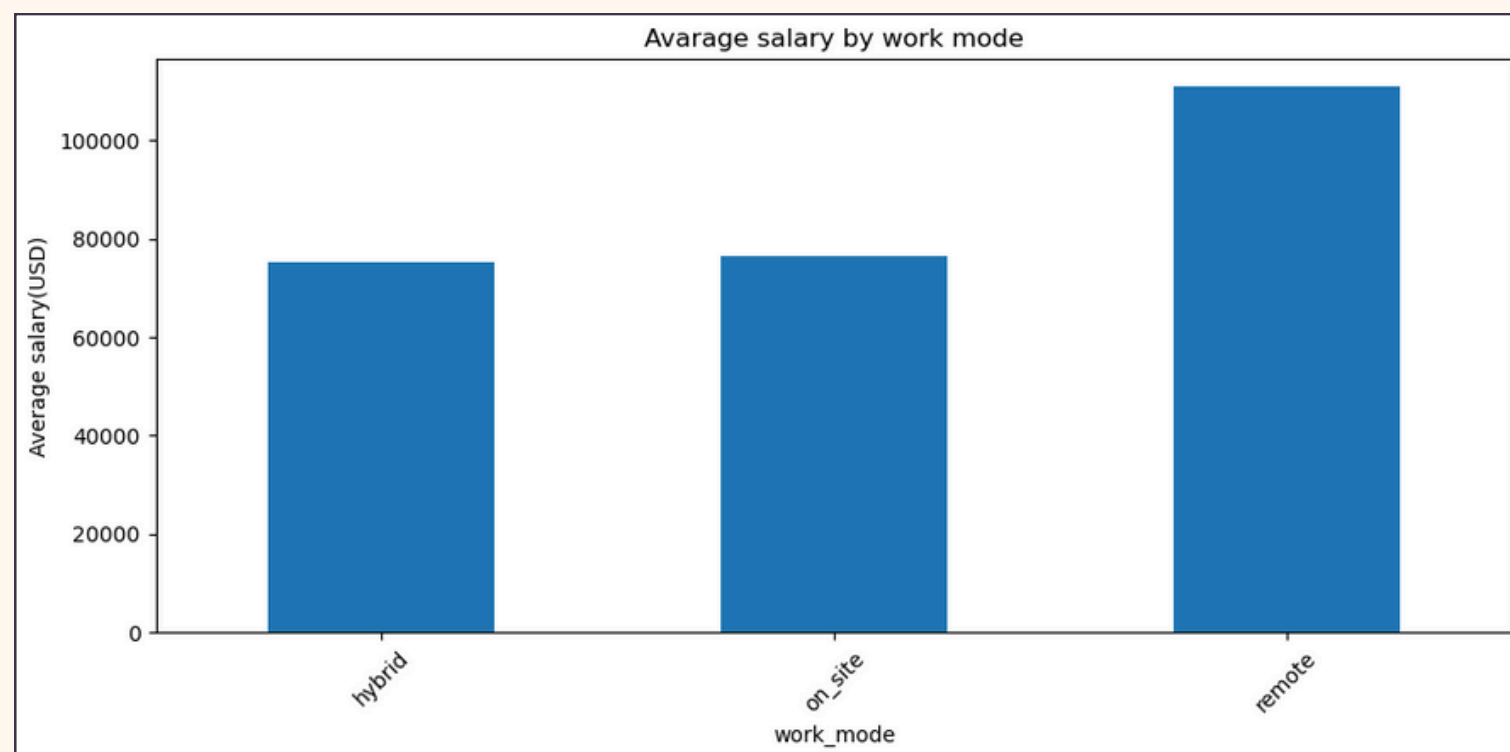

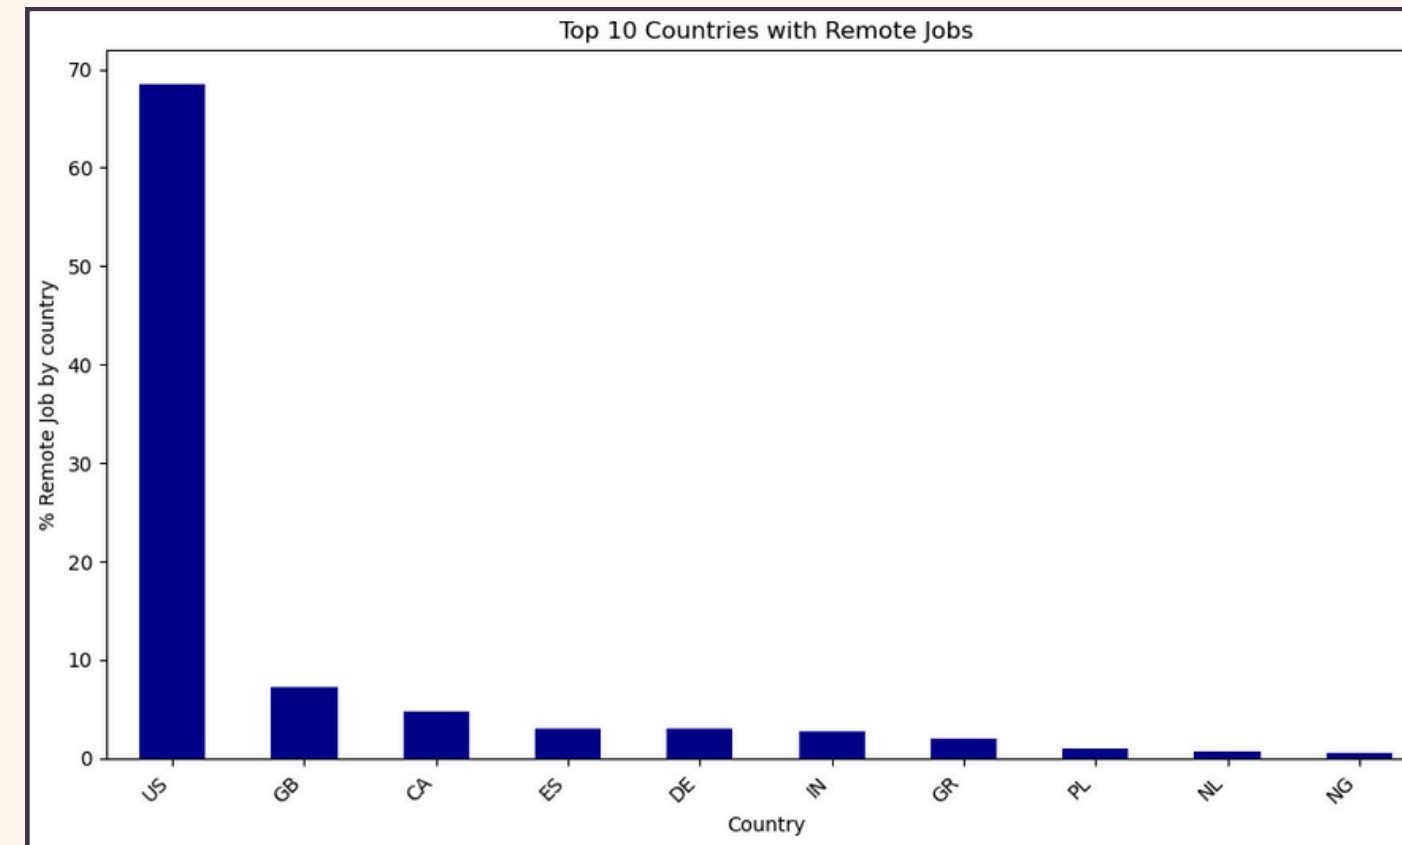

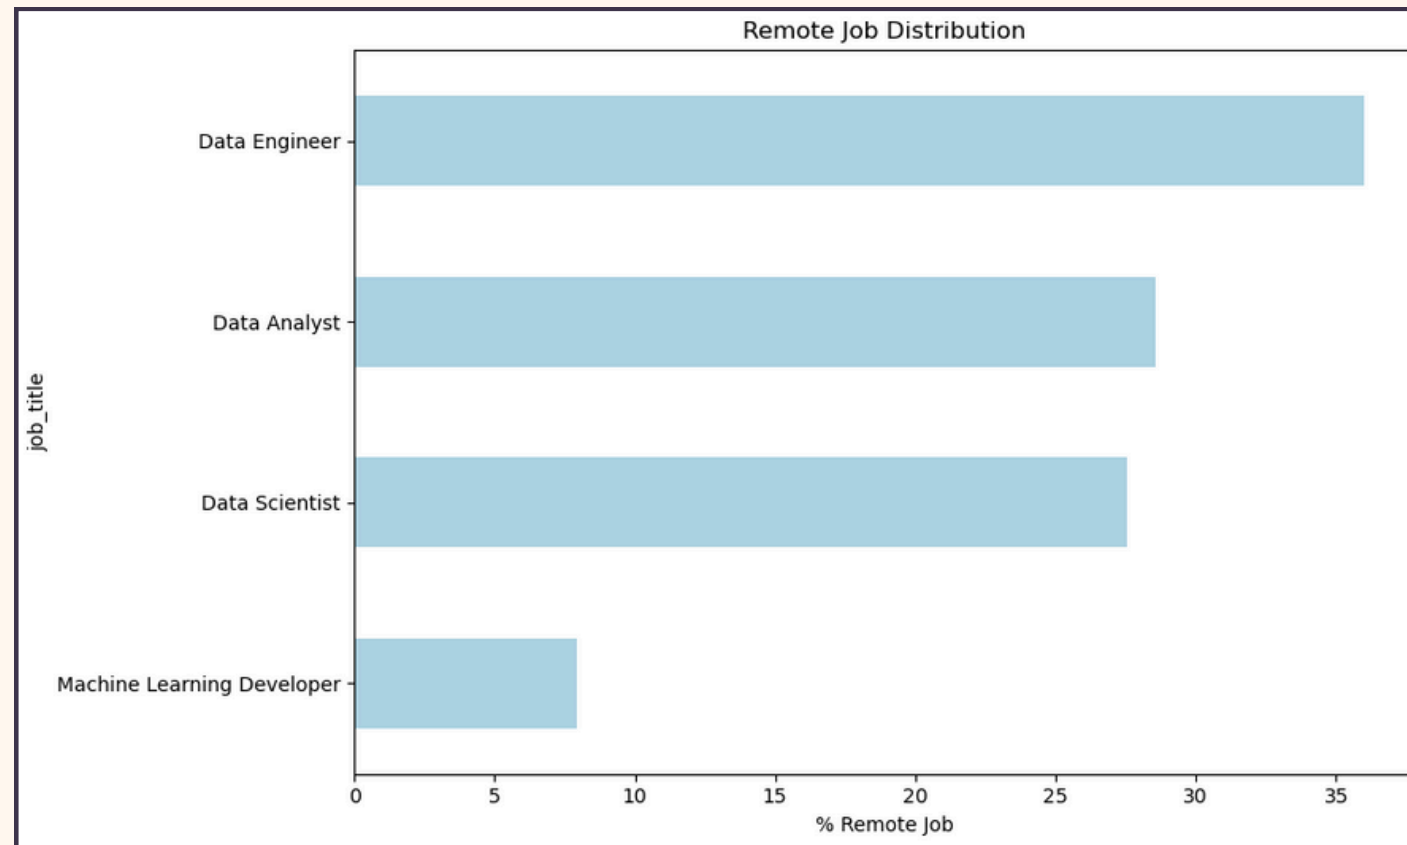

-  High-paying data jobs demand specific technical skills more often
-  Remote jobs offer different salary levels compared to on site roles

**What patterns are expected to see
in this data?**

What is the most profitable job role?

What is the ideal job?

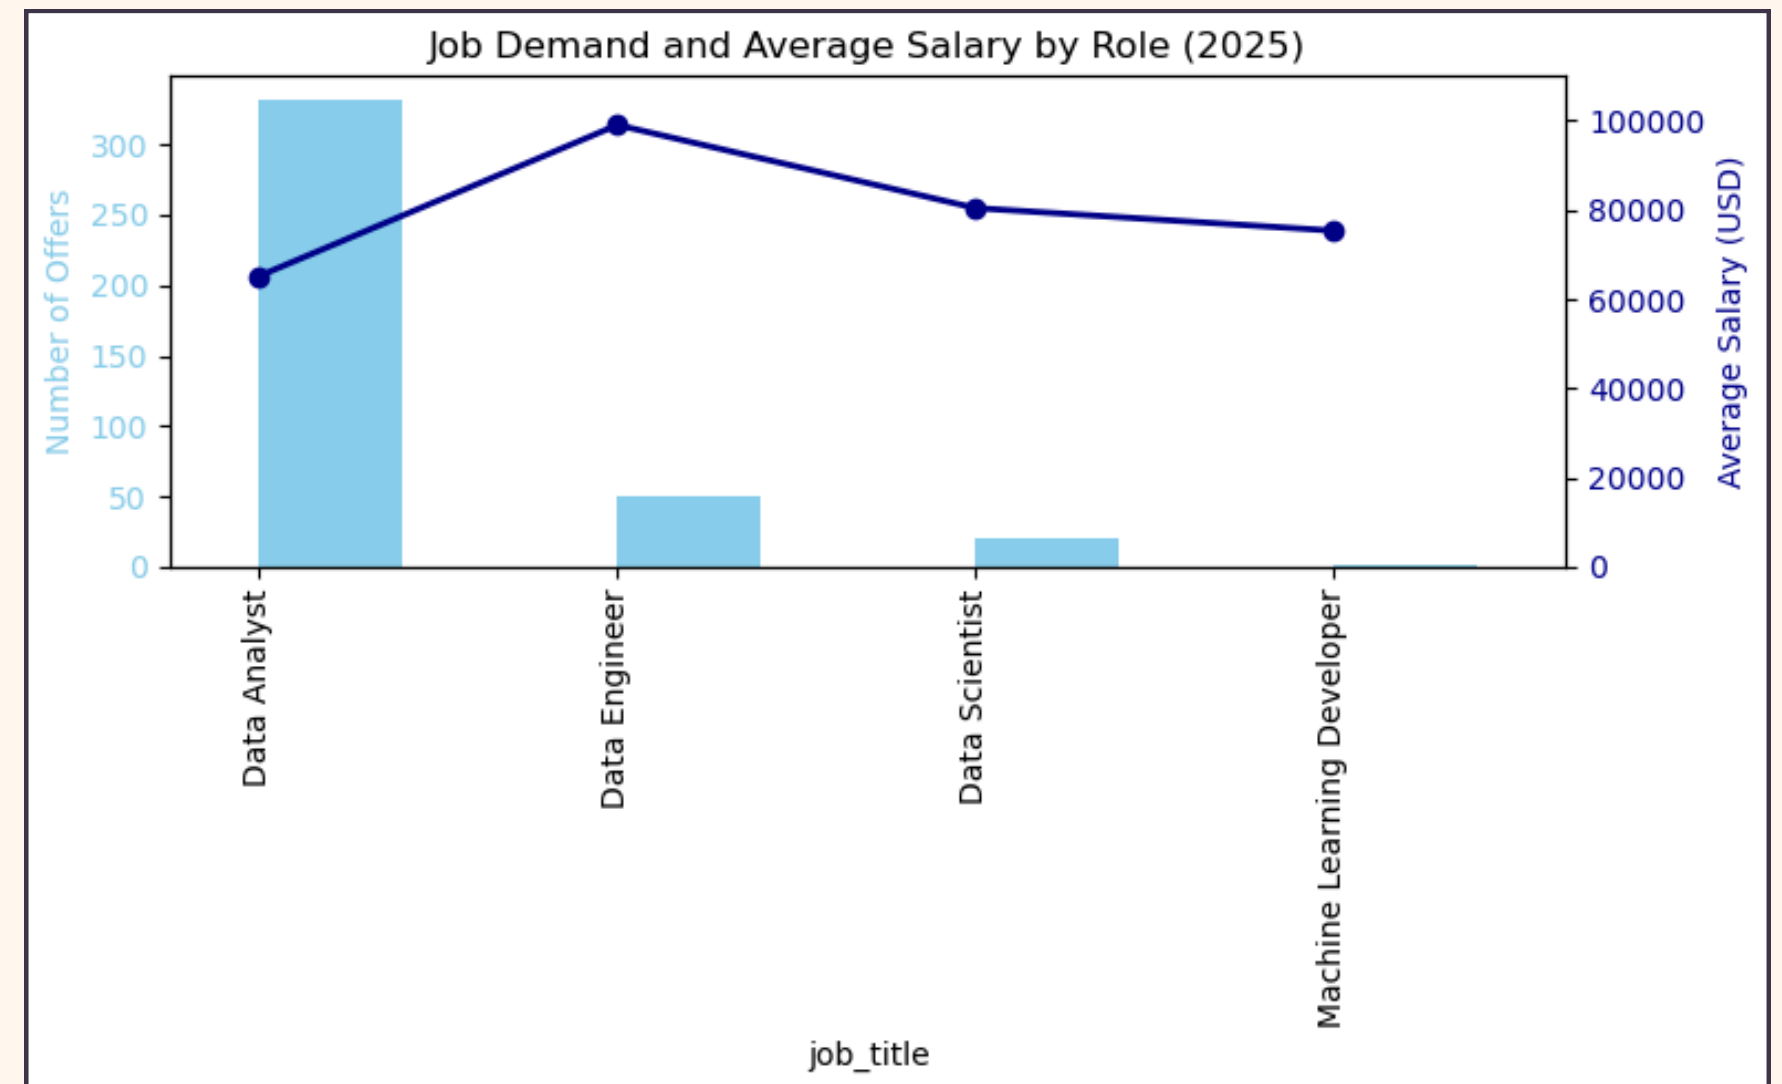

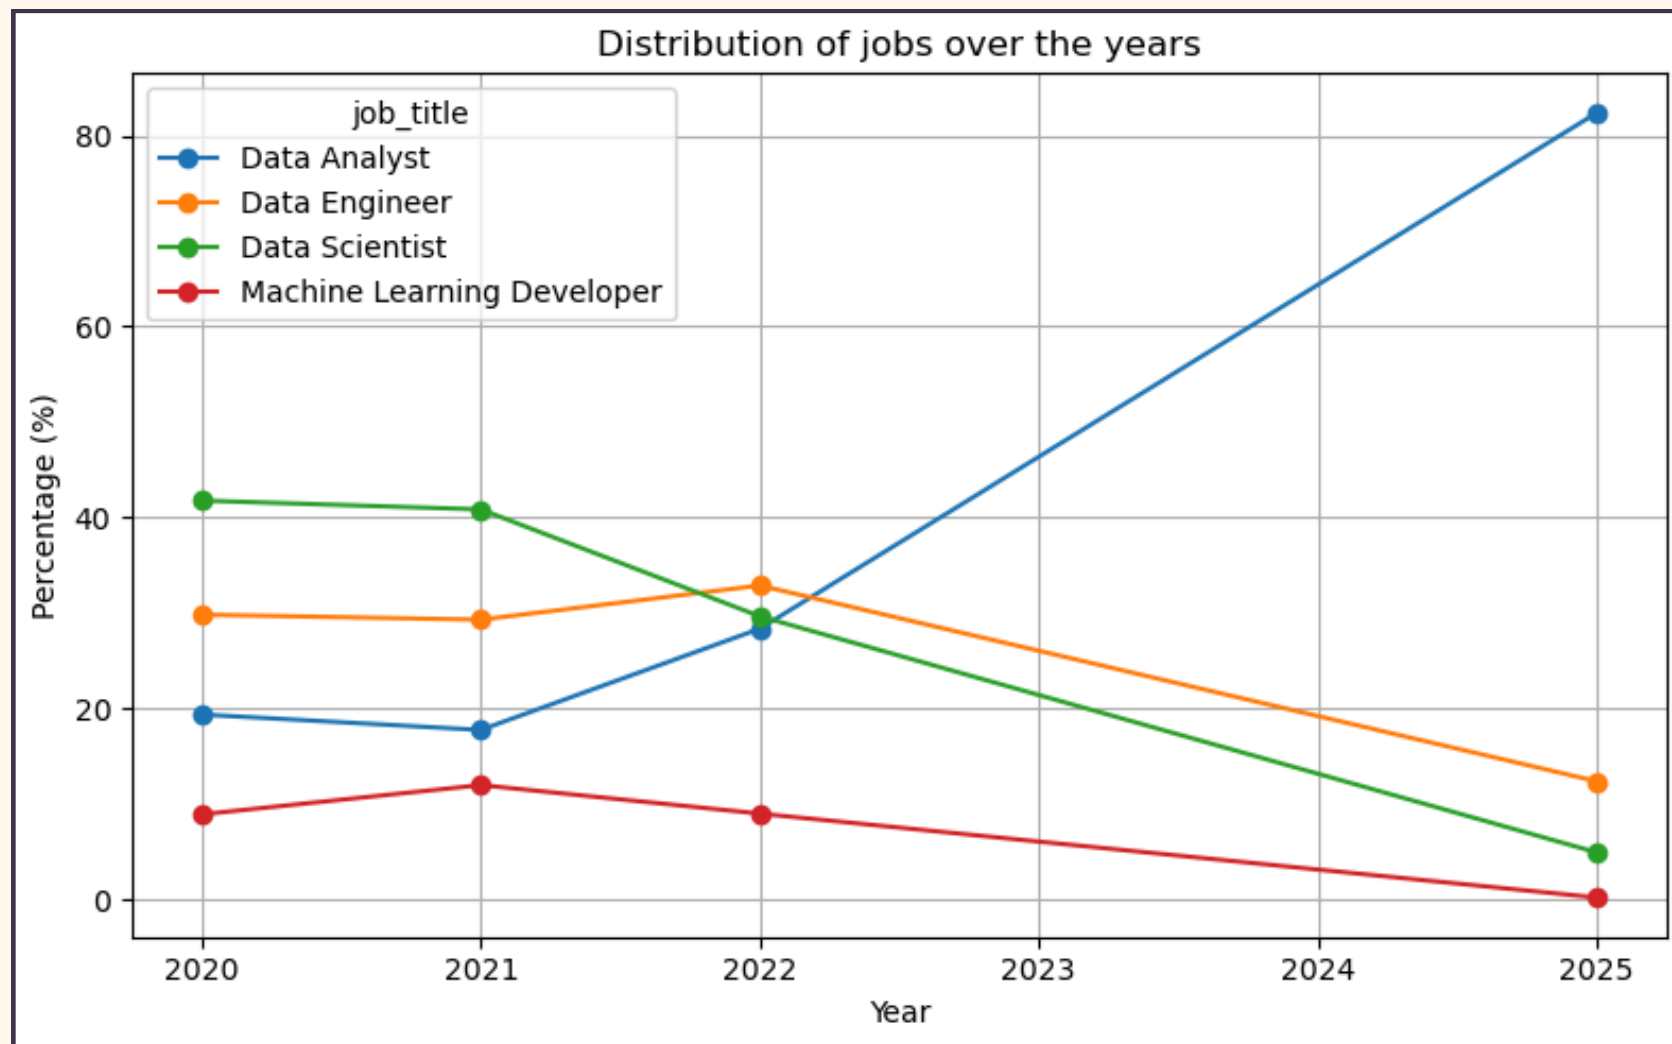

Data Engineer

mode

What jobs are most in demand?

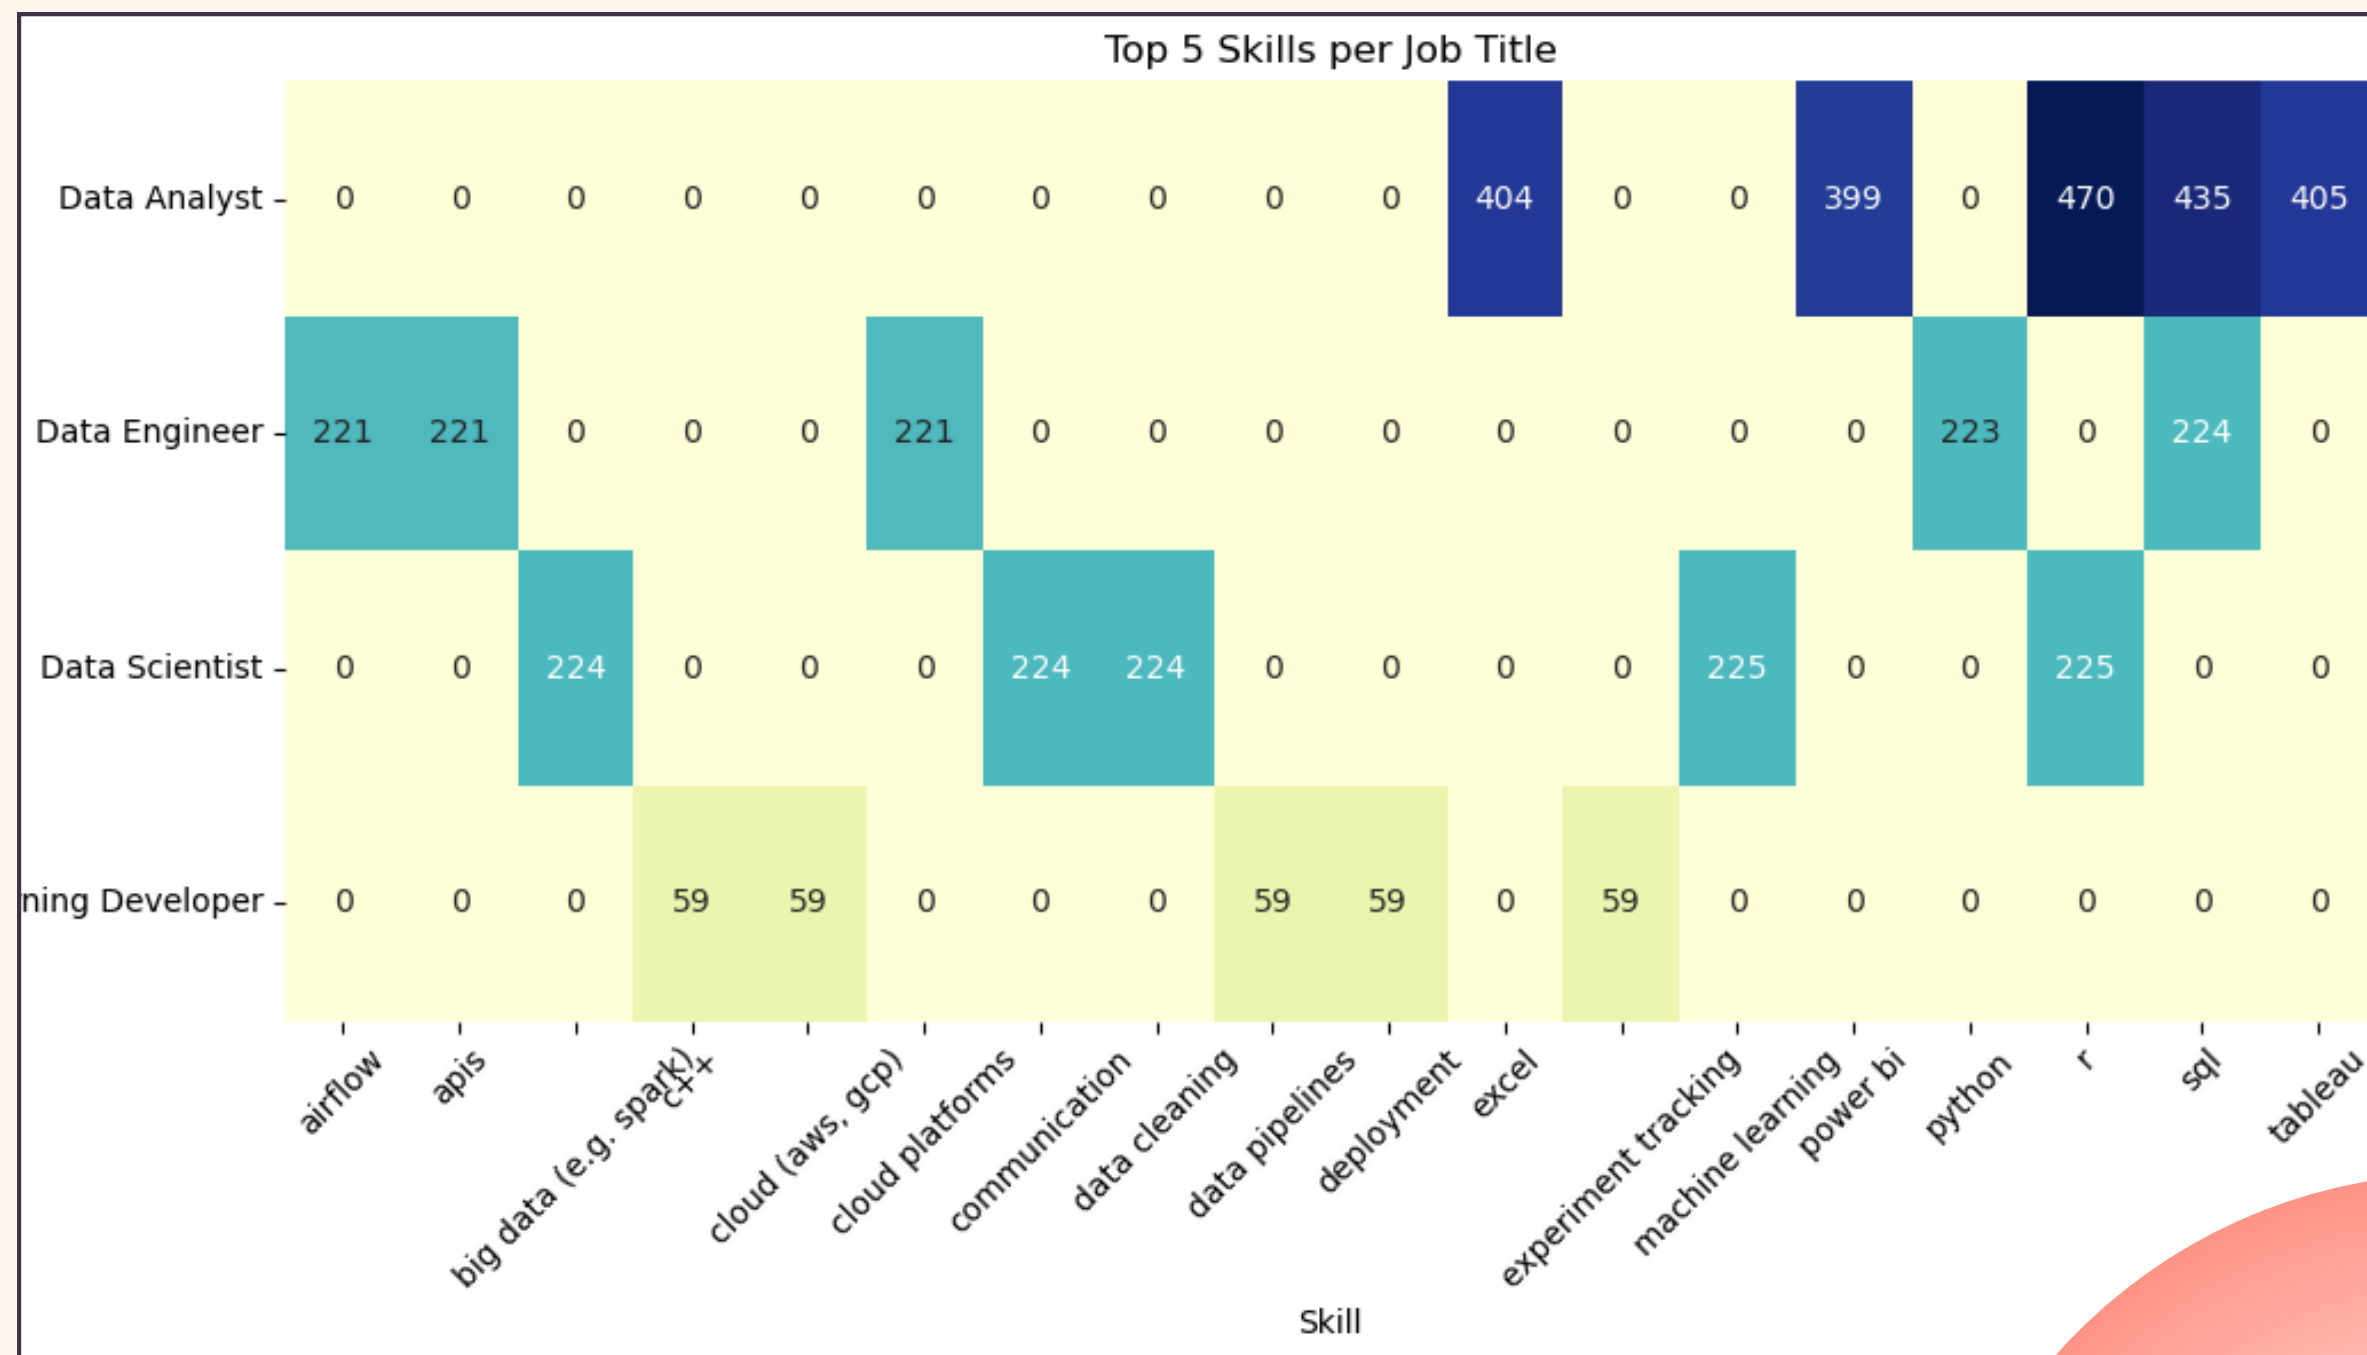

What skills should you focus on?

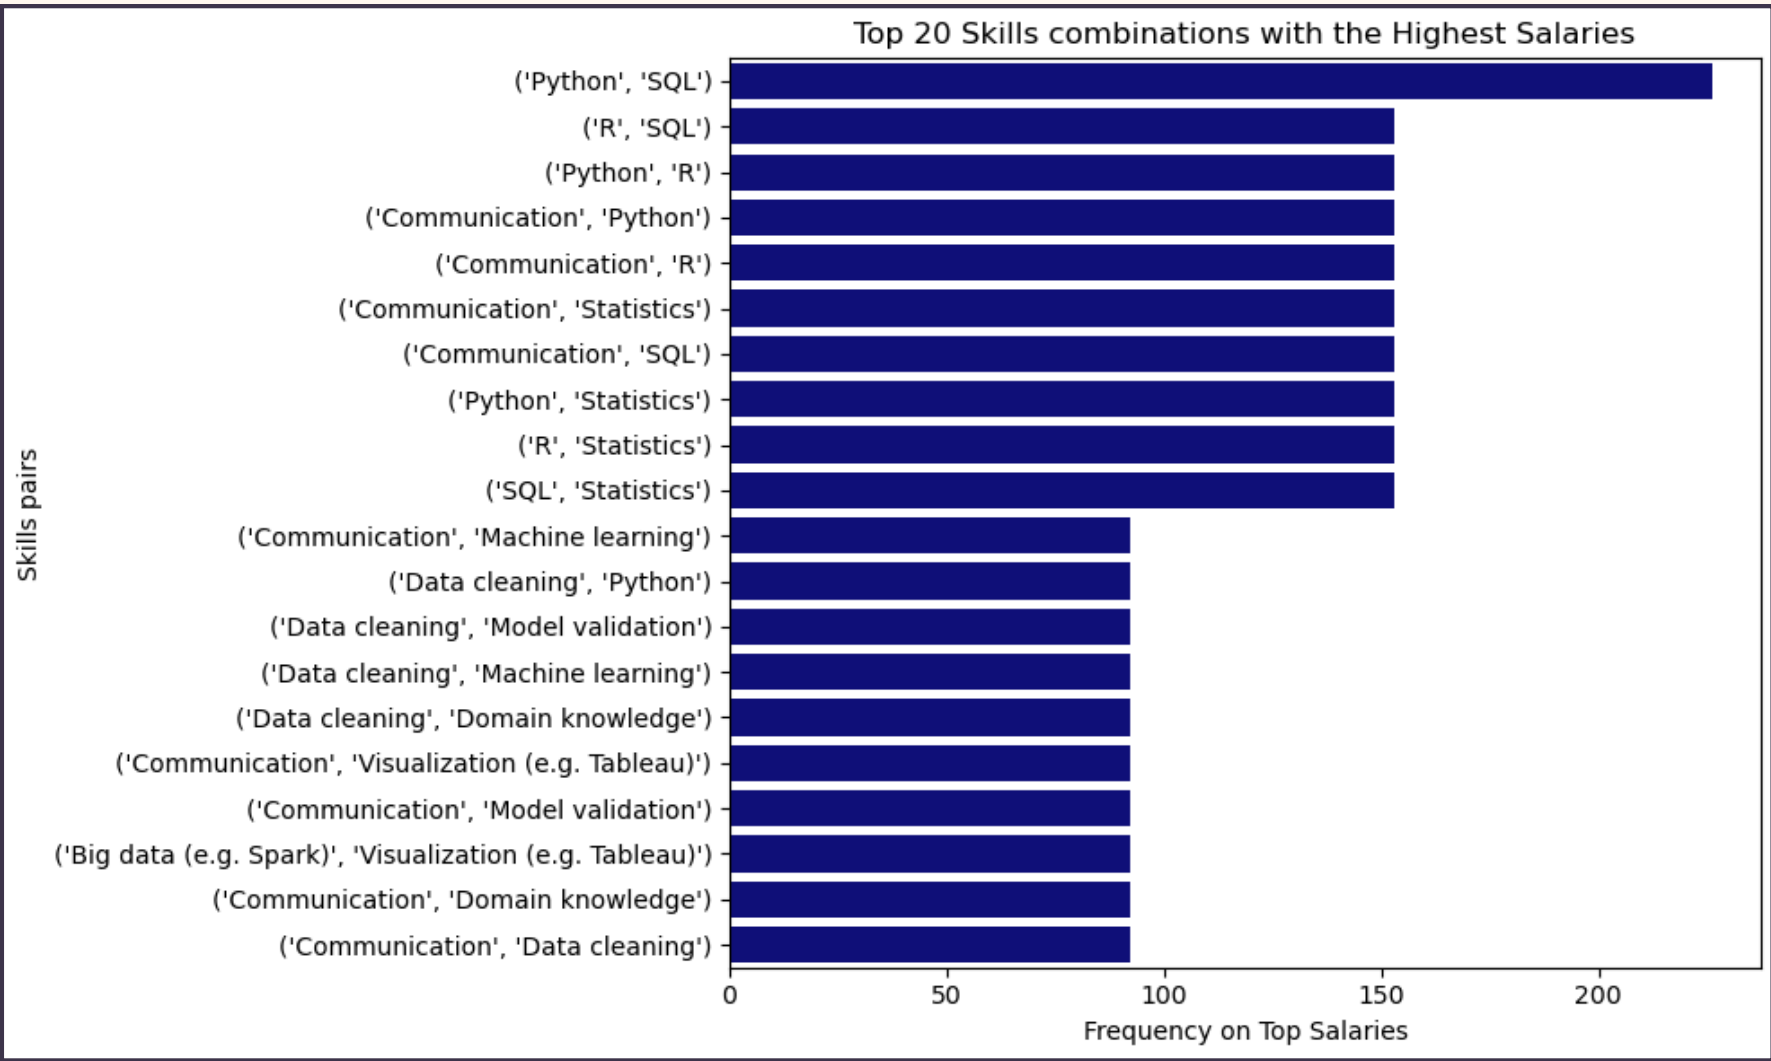

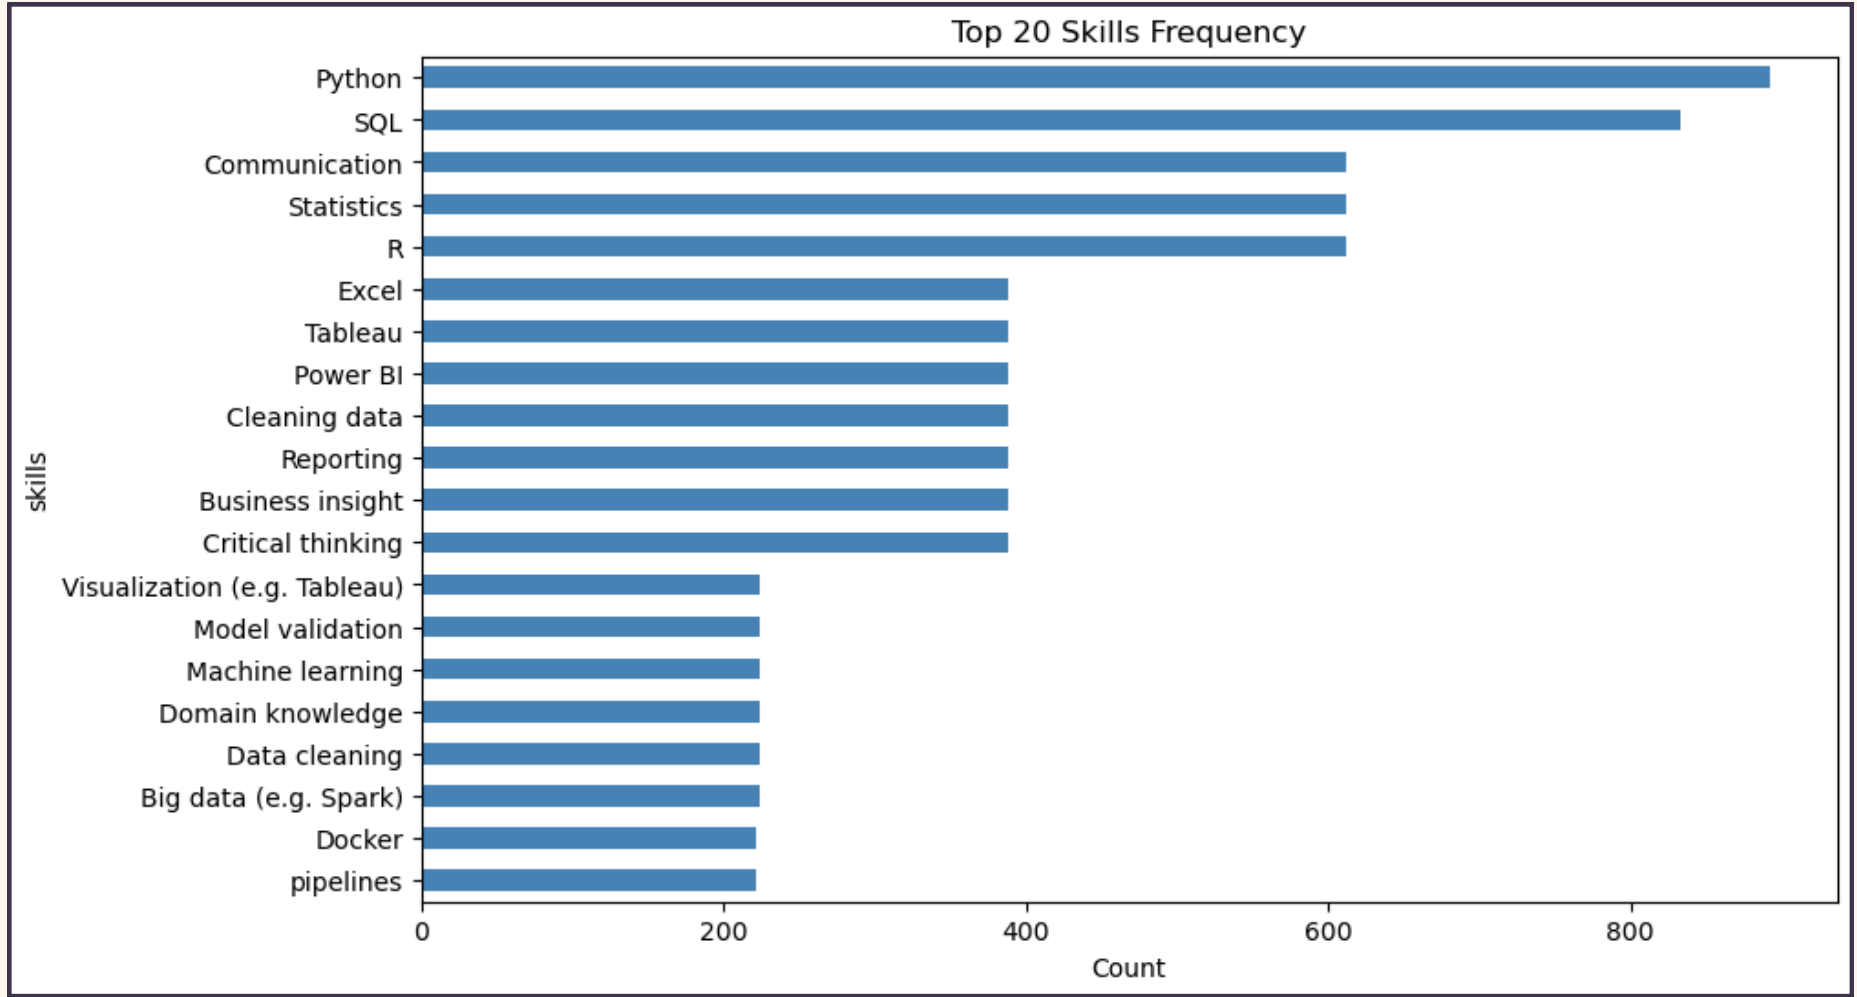

Focused (Data Analyst)

Top 10 skills per job title

Top 5 skills per job title

Focused (Job role)

What skills pay the best?

Strategic Recommendations

Focused on the most in-demand skills

Recommendation: Launch a bootcamp focused on Python, SQL, ML, and Excel

Match candidates to job market needs

Recommendation: Partner with universities to build early talent pipelines

Upskill internal teams with targeted programs

Recommendation: on-the job training

Track salary trends to stay competitive

Recommendation: use the Data Professors experience & database

Prioritize hiring for remote-friendly roles

Recommendation: Data Professors consultation

Thank you!
